

PIXEL-CONTROLLED LIGHT ON FOIL

#DigitalVideoWallpaper opens new dimensions in the design with animated LED light.

However you want to name it - #DigitalVideoWallpaper or simply digital light on foil: you will recognize its true dimension only when you see it. Florian Kall and Lutz Nehrhoff von Holderberg bring digitally animated light into new dimensions with LightnTec. Whether abstractly illuminated ceiling or wall paintings with freely changeable and flowing colour fields, large-scale moving pictures on a trade fair billboard, video-controlled shop windows with displayed LED animations or whole facades with programmed presentations of texts, pictures or videos: the visionaries of LightnTec really earned the VR-Price of innovation mid-sized sector 2018 of the Volksbanken and Raiffeisenbanken of Baden-Württemberg. Or how Markus Dauber commented the award of the clients of Volksbank Ortenau: "These are exactly the future champions that we preferably accompany. A fantastic idea that was not considered feasible by many people at the beginning hit the ground running." LEDs including power supply and electronics assembly completely applied on foil: there has never been anything like it! CTO Lutz Nehrhoff von Holderberg would love to take this literally. It is his dream to equip a whole airship with foil of LightnTec: "Companies could bring their animated colourful advertising images dynamically into the skies."

"A LIGHT FOIL IN ANY CONCEIVABLE DIMENSION"

The wallpaper of LightnTec is ultrathin, ultralight, able to be rolled in and weatherproof. It can be easily cutted into any size and works as a flexible monitor on nearly every surface in indoor and outdoor areas. LEDs including power supply and electronic assembly are completely applied on foil. Just upload a Video - and enjoy it.

#DigitalVideoWallpaper: Any Size. Any Place. Any Shape.
